Red Hill Valley Nest

## Preliminary Design Submission #1

May 2016

dtah

## The functional habitat.

*A nest is something completely created by and for the benefit of a person or animal. It would not exist without someone creating it.*

At the base is a landform that acts as shelter for people. It blends into the landscape and creates the illusion of a depression at its centre. Limestone blocks will retain the landform while also creating amphitheater seating in the perceived depression. The vertical sculptural elements, constructed from utility poles and cross braces of metal or wood, would organically surround the core of the space, expressing the visual vernacular of the nest habitat while also creating opportunity for functional habitat.

*Shelter through landform topography.*

*Visual vernacular of nest habitat.*

*Opportunity for functional nest.*

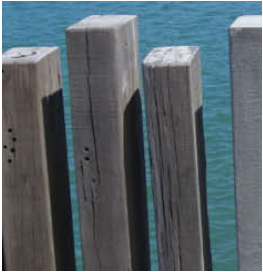

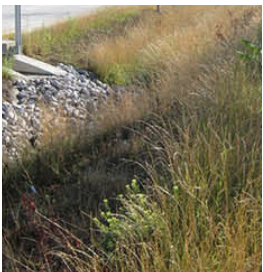

*Utility Poles*

*Reclaimed Timber*

*Limestone*

*Grasses*
